fle

Application/Control Number: 10/666,879 Page 2

Art Unit: 1762

1. Claims 1-2 remain in the application.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

No piezoelectric elements are claimed. Only method claims remain.

3. The disclosure is objected to because of the following informalities:

The US Pat No. 6,731,049 for Divisional application 10/072,297 needs to be updated in the specification.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/666,879 Page 3

Art Unit: 1762

With respect to claims 1-2, the claims are confusing and unclear. It is unclear whether NiO is added to the piezoelectric composition and then heat treated or whether the piezoelectric material is heat treated in an atmosphere containing NiO. In addition, it is unclear what formula would be formed by such a process, i.e. will nickel be included in the composition to form a lead nickel niobate composition.

With respect to claim 2, the phrase "a container for housing said electrode setter for mounting...." is unclear. How is the NiO being formed as a container and setter? Clarification is requested.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Takeuchi et al. (5,376,857).

Takeuchi et al. (5,376,857) teaches a piezoelectric device whereby a piezoelectric layer(5) is applied to an electrode layer (4) situated on top of a ceramic substrate (2) (abstract). A piezoelectric layer (5) can be formed with any piezoelectric material including lead zirconate titanate (PZT) and lead magnesium niobate (PMN) with the addition of additives including

Application/Control Number: 10/666,879

Art Unit: 1762

oxides of nickel (col. 11, lines 40-65). After deposition of the electrodes and piezoelectric material by a variety of methods (col. 10, lines 1-5), a heat treatment is performed to form the final structure (col. 10, lines 29-60).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian K. Talbot whose telephone number is (571) 272-1428. The examiner can normally be reached on Monday-Friday 6AM-3PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy H. Meeks can be reached on (571) 272-1423. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
